

Fluid Path Products

Safety. Repeatability. American Made.

Metal Detectable Polymer Solutions

Gaskets are susceptible to fragmenting, which puts processed fluids at risk for contamination. Fluid Path Products detectable gaskets are identified by downstream metal detectors ensuring that your finished product is captured before it's shipped to consumers. We are the pioneers of metal detectable gaskets for the food processing industry. Now you can buy metal detectable gaskets manufactured in America by FPP comprised of the highest quality polymer compounds in the industry.

The choice of rubber and plastic materials, as well as geometries, are endless. Our compounds are designed for longevity and chemical resistance of CIP chemicals.

Materials: Buna, EPDM, silicone, Viton, PTFE, & many others.

Geometries: o-rings, clamp gaskets, John Perry, Bevel Seat, cord, sheet

Mixed Gaskets

Fluorosteel

Clamp Gaskets

THE PIONEERS OF METAL DETECTABLE

Fluid Path Products is home to the original metal detectable concept and design. Yet, we proudly have continued to develop and produce exceptional quality MD products for the food-processing industry.
